

Progress Report

Paper ID 196

Progress Made: Our team had 3 zoom meetings to discuss and understand the EducationWeb System and we made discussions about the potential bullet points and the potential improvements for the system. The small improvements we are interested in are scaling up the current system, Allowing downloading slides in bulk, adding more context to explanation, and integrating the tool with piazza. We may finally abandon some of the our choices based on the difficulty and time.

Remaining tasks: We will push the remaining code to git, and we have finished 1 one the bullet point we mentioned above, and we are still working on scale up the system and allowing downloading slides in bulk this week, we may finish our code production on Dec,5 and have a zoom meeting to test and make improvements of the code. In addition, we may make a Youtube video to present our results to the peer reviewer.

Challenges/Issues: If encountered we will attend office hour.
